Further, Mase et al teach a plastic lens formed by laminating, in order, a plastic lens substrate, a primer layer, a hardcoat layer and an anti-reflection layer, wherein the primer layer is formed from a primer composition comprising a polyurethane and a metal oxide compound in a solvent such as propylene glycol monoethyl ether. However, Mase et al do not teach or render obvious that the polyurethane is a self-emulsifiable emulsion of a linear polyurethane having a pendant carboxylic acid group and no crosslinked structure between polymer chains.
